EDUCATION

University of California San Diego - La Jolla, CA <i>Major: Aerospace Engineering</i> <i>Field: Dynamic Systems and Controls</i>	Current Ph.D., Expected May 2027
University of California San Diego - La Jolla, CA <i>Major: Aerospace Engineering</i> <i>Field: Dynamic Systems and Controls</i>	M.S., June 2024 <i>GPA: 3.744</i>
Colorado School of Mines - Golden, CO <i>Major: Engineering Physics</i> <i>Minor: Robotics and Intelligent Systems</i> <i>Area of Special Interest: Space and Planetary Sciences Engineering</i>	B.S., May 2022 <i>Summa Cum Laude, GPA: 3.93</i>

RELEVANT EXPERIENCE

NSTGRO Visiting Technologist Experience - Jet Propulsion Laboratory	June 2024 - August 2024, June 2025 - August 2025
• 10-week summer internship in Section 392K: Mission Design and Navigation System Engineering	
• Applied non-Gaussian ensemble and grid-based techniques to the state uncertainty propagation of distant prograde orbits in the Saturn-Enceladus system as a proof of concept for outer planetary orbilander estimation and navigation	
• Facilitated efficient communication between JPL's Monte library and C source code via Python wrapper	
Air Force Office of Scientific Research (AFOSR) Summer Faculty Fellowship Program	July 2023 - September 2023
• Performed research at the Air Force Maui Optical and Supercomputing (AMOS) site hosted by the 15th Space Surveillance Squadron	
• Developed a thorough validation of the landscape of numerical integrators and their respective accuracies relating to the state propagation of cislunar satellites in near-rectilinear halo orbits (NRHOs)	
• Used publicly available ephemerides of CAPSTONE to detect orbital-maintenance maneuvers (OMMs) for numerical integration accuracy analysis, specifically comparing REBOUND, ASSIST, and GMAT	
Auger@TA Ultra High Energy Cosmic Ray Detector Simulation Analysis	August 2021 - May 2022
• Collaboration between the Pierre Auger Observatory in Argentina and the Telescope Array in Utah to calibrate energy detection method variations	
• Collected data using Linux Offline simulations with a varying number of photomultiplier tubes to determine if results were similar	
• Visualized simulation data on the reliability of a single PMT detector vs. a triple PMT detector via Python	
• Principal Investigator: Dr. Frederic Sarazin, Colorado School of Mines Physics Department	
National Science Foundation REU - University of Florida, Astronomy Department	May 2021 - August 2021
• Developed and gave presentation on decomposing galactic spectral energy distributions and inferring properties from the simple stellar populations that make up the galaxies	
• Utilized Bayesian statistics programming, specifically Markov Chain Monte Carlo to find spectrum best fit for age/metallicity	
• Used HiPerGator, UF supercomputer, along with other Python simulation tools and techniques to model galactic behavior	
• Principal Investigator: Dr. Paul Torrey, University of Florida Astronomy Department	
UC San Diego MAE143B Linear Control Teaching Assistant	August 2025 - September 2025
• Duties included holding office hours, developing solutions sets to homeworks and exams, grading homework and exams, and presenting in lecture	

HONORS AND AWARDS

• NASA Space Technology Graduate Research Opportunities (NSTGRO) Fellow (Grant # 80NSSC23K1219), "A Grid-Based Bayesian Approach to Uncertainty Propagation for Icy-Moon Missions" proposal (August 2023 - August 2027)
• Chambliss Astronomy Achievement Student Award Honorable Mention , 240th AAS Meeting Presentation on "A Flexible Approach to Fitting Galactic Spectral Energy Distributions" (June 2022)
• Colorado School of Mines Undergraduate Research Fellow (MURF) , "Assembly of Microparticles for Robots and Composite Materials Under Combined Electric and Magnetic Fields" (August 2020 - May 2022)
• Colorado School of Mines Physics Undergraduate Research Symposium: Best Individual Technical Research Project , "Optimizing the Selection of Reconstructed Events in Auger@TA for Cross-Calibration Purpose Through Simulations" (April 2022)
• Colorado School of Mines Dean's List (August 2018 - May 2022)

ORAL PRESENTATIONS

- P9 *Efficient Prediction of the Gaussianity Validity Time in the Circular Restricted Three-Body Problem*, COPERNAICUS Seminar, Online (Sept 2025)
- P8 *GBEES-GPU: An efficient parallel GPU algorithm for high-dimensional nonlinear uncertainty propagation*, Cassini Computer Physics Seminar Series, <https://doi.org/10.52843/cassini.m84f85> (Sept 2025)
- P7 *Predicting the Temporal Limits of Gaussianity in the Saturn-Enceladus System with the Unscented Transform*, Jet Propulsion Laboratory, Pasadena, CA (July 2025)
- P6 *Non-Gaussian Recursive Bayesian Filtering for Outer Planetary Orbilander Navigation*, Jet Propulsion Laboratory, Pasadena, CA (August 2024)
- P5 *xGEO Numerical Integrator Analysis and Maneuver Detection*, REBOUND Conference 2024, Online (July 2024)
- P4 *An Evaluation of Physics Based Force Model Performance in LEO: Implications for Next Generation Space Traffic Management*, Committee on Space Research, Busan, Korea (July 2024)
- P3 *On the Validity of the Gaussian Assumption in the Jovian System: Evaluating Linear and Nonlinear Filters for Measurement-sparse Estimation*, 6th International Workshop on Key Topics in Orbit Propagation Applied to SSA, Universite d'Artois, Arras, France (June 2024)
- P2 *A Flexible Approach to Fitting Galactic Spectral Energy Distributions*, 240th AAS Meeting, Pasadena, CA (June 2022)
- P1 *Synthesis and Assembly of Anisotropic Particles*, Colorado School of Mines Undergraduate Research Symposium, Golden, CO (April 2022)
